

The Red Oxygen Command Line SendSMS.exe utility makes it possible to easily send SMS automatically from batch files.

Typical Uses

- Get an SMS whenever a particular PC is booted
- Get an SMS after completion of a scheduled task
- Configure monitoring software to call a batch file when there is a problem

Requirements

- Microsoft Windows NT, 2000, XP and 2003 Server
- Internet connection

Usage: SendSMS <MobileNumber> <Message>

Example: C:\SendSMS 0419000000 Test Message

Configuration

Create or edit the file called SENDSMS.INI which must exist in the same directory as the SendSMS.exe file.

```
[CONFIG]
AccountID=
Email=
Password=
```

Sending to multiple recipients

Example: C:\SendSMS "0419000000,040700001111" Test message to multiple recipients

Installation

Put SendSMS.exe and SendSMS.ini in a directory that is in the PATH of the user that will execute it.
